# INTRODUCTION

## 1. BACKGROUND

Every five years Statistics Canada completes a national Census. This involves sending a questionnaire to every household in Canada to acquire basic social and economic data. Some questions are asked of all households and therefore represent a 100% response. Other questions are received by only 20% of households and represent a sample response. Data are released in stages and first priority is given to releasing 100% data.

Volume 1 of this report, issued earlier, examined those data covered by the 100% response. This volume will summarize the sample data.

## 2. PURPOSE OF REPORT

1. To provide a summary of the 20% census data describing Ottawa-Carleton and area municipalities.
2. To examine how Ottawa-Carleton compares with other large urban centres in Canada.
3. To explore trends in selected data over time in Ottawa-Carleton.
4. To identify variations in circumstances between areas within Ottawa-Carleton.

## 3. DATA COVERAGE

Reference should be made to Volume 1 of this report for data on population, dwellings, households and families. This volume is somewhat more oriented towards economic data although it touches on a wide range of characteristics.

**The 20% data includes information on:**

- **Population Mobility**
- **Immigration**
- **Official Language**
- **Dwelling Period of Construction**
- **Home Heating Fuel**
- **Income**
- **Employment**
- **Occupation**
- **Education**

## 4. GEOGRAPHIC COVERAGE

Data in the accompanying tables are reported for Ottawa-Carleton and for sub-areas within Ottawa- Carleton. For analysis purposes, interest is in examining urban areas inside the inner limits of the greenbelt, urban centres outside the greenbelt and rural areas. Area municipalities, falling within two or three of these sub-regional areas, have been split up for reporting purposes. Therefore, the City of Nepean, for example, appears as i) Nepean, inside greenbelt; ii) South Urban Centre, Nepean (Barrhaven); and iii) Rural Nepean.

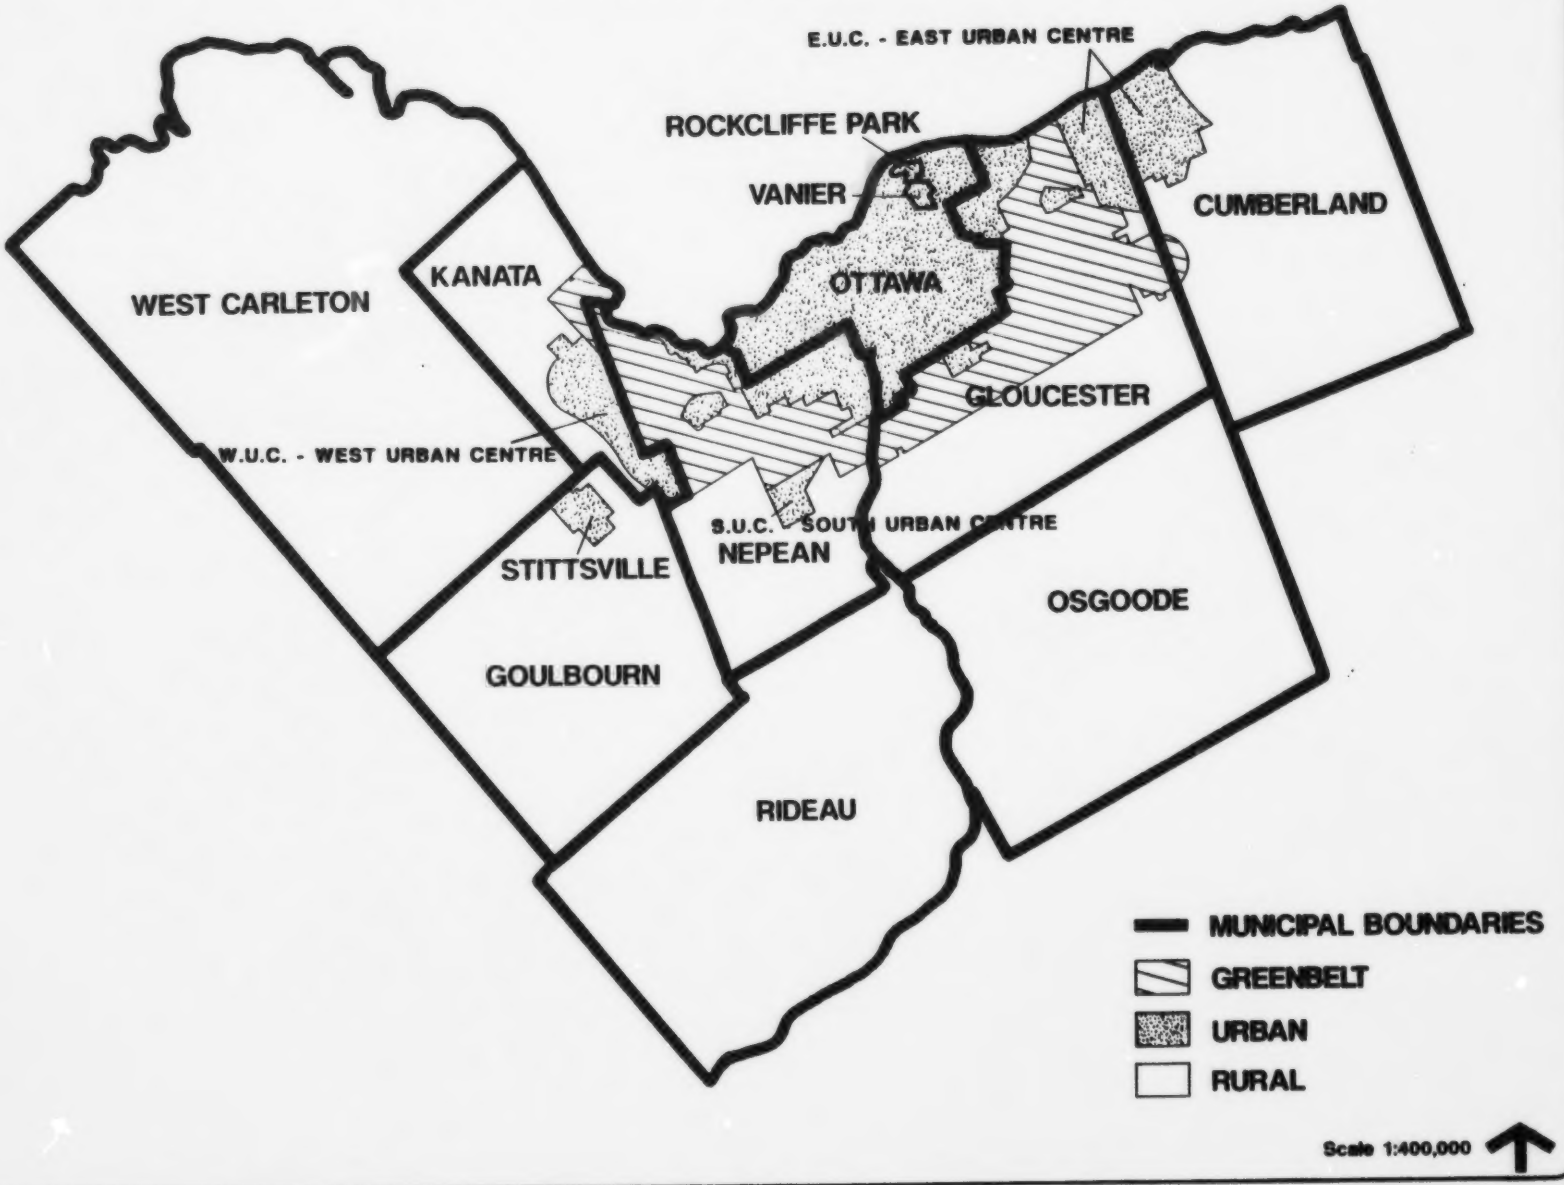
As a consequence, data are summarized for 19 sub-areas. These are identified in Exhibit 1. It is possible to aggregate data in the Appendix to create municipal totals. Data are also summarized for urban areas across Canada. In all cases, these are represented by the Census Metropolitan Area (CMA) but compared with the Regional Municipality of Ottawa-Carleton.

## 5. DATA SOURCES

The data compiled for this report are primarily those published by Statistics Canada. A great deal of additional data exist in unpublished form and are available, from them, for a fee. This report also made use of "Desktop Demographics with the Census of Canada" (Tetrad Computer Applications Ltd), which allowed for the creation of sub-regional data based on an aggregation of small geographic units (enumeration areas).

EXHIBIT 1

# REGIONAL MUNICIPALITY OF OTTAWA-CARLETON AND SUB-REGIONAL AREAS



# POPULATION MOBILITY

See Tables 1 to 3 in the Appendix.

**1. The population is more mobile in Ottawa- Carleton than it is in most other Canadian urban areas.**

In Ottawa-Carleton, approximately 54% of the population moved to their address between 1981 and 1986. They may have come from somewhere else in the same city, from somewhere else in the country or from outside Canada. Only in the Calgary urban area was the percentage higher. These data are summarized in Table 1 in the Appendix.

**Exhibit 2**

% POPULATION THAT MOVED, 1981-1986

| AREA | % POPULATION 5 YEARS + |
|---|---|
| CANADA | 44 |
| ONTARIO | 45 |
| RMOC | 54 |
| TORONTO | 47 |
| HAMILTON | 42 |
| LONDON | 48 |
| HALIFAX | 49 |
| ST JOHN | 41 |
| MONTREAL | 46 |
| QUEBEC | 42 |
| WINNIPEG | 46 |
| SASKATOON | 53 |
| REGINA | 50 |
| CALGARY | 57 |
| EDMONTON | 52 |
| VANCOUVER | 51 |
| VICTORIA | 51 |

**2. Approximately one quarter of residents in Ottawa-Carleton moved to another address within the same municipality.**

These people moved within Nepean or within Ottawa , and so on. These are classified as "non- migrants" in Table 2 in the appendix. New residents from outside Ottawa-Carleton, or from a different municipality in Ottawa-Carleton, accounted for another quarter of the population.

**3. A larger proportion of the population moved between 1971 and 1976 than in more recent periods.**

In all three periods since 1971, Ottawa-Carleton had a more mobile, population than Ontario in general. The additional movement between 1971 and 1976 was primarily due to a somewhat larger proportion of movers from outside Canada. Movement within a municipality has been relatively constant. Finally, it is clear that Ottawa-Carleton attracts a larger proportion of movers from other provinces than does Ontario in general.

**Exhibit 3**

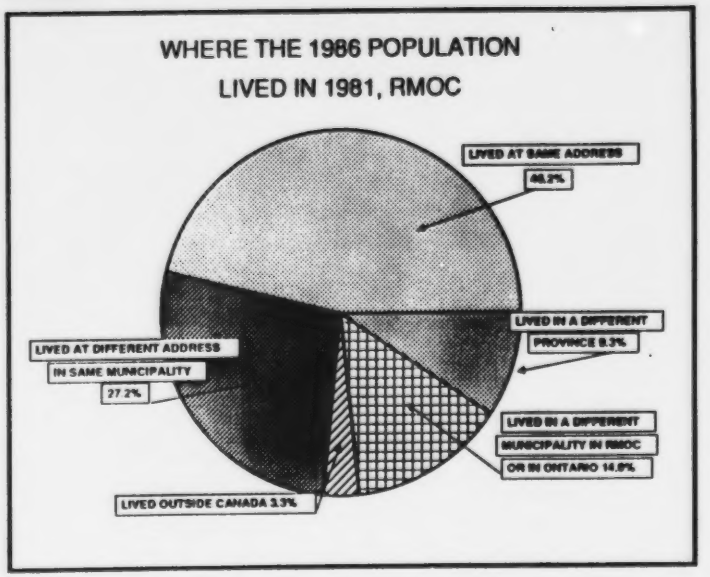


**Exhibit 4**

MOBILITY IN ONTARIO AND OTTAWA-CARLETON, 1971-1986
**% OF POPULATION OVER 5 YEARS OLD**

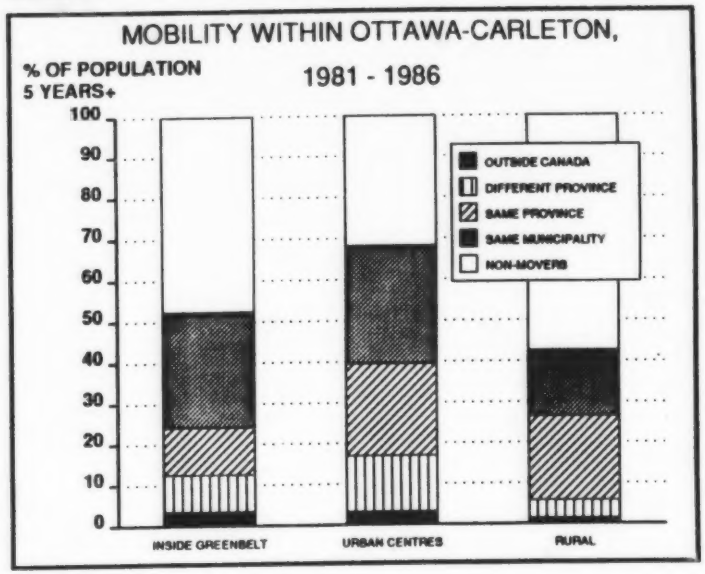
| | Ontario | | | Ottawa-Carleton | | |
|---|---|---|---|---|---|---|
| | 71-76 | 76-81 | 81-86 | 71-76 | 76-81 | 81-86 |
| Non Movers | 50.7 | 53.1 | 55.5 | 43.6 | 46.9 | 46.2 |
| Movers | 49.3 | 46.9 | 44.5 | 56.4 | 53.1 | 53.8 |
| Within Municipality | 24.1 | 25.1 | 24.4 | 27.8 | 28.1 | 27.2 |
| From Outside Municipality | 25.2 | 21.7 | 20.1 | 28.5 | 24.9 | 26.6 |
| Same Province | 17.0 | 15.5 | 14.1 | 14.0 | 12.3 | 14.0 |
| Different Province | 2.6 | 3.2 | 3.4 | 9.0 | 9.2 | 9.3 |
| Outside Canada | 4.7 | 3.1 | 2.6 | 4.5 | 3.4 | 3.3 |

**4. The expanding urban centres outside the greenbelt boundary exhibit the largest proportion of movers.**

As one would expect, the municipalities with the highest proportion of new dwellings have the highest proportion of their residents at new addresses. What is surprising is that within the greenbelt, where only about 8% of the housing stock was built between 1981 and 1986, over half the residents were new to their address. Half of these in turn were simply the result of internal movement.

The rural population is less mobile than that of other parts of Ottawa-Carleton but on a par with the Ontario average.

Exhibit 5

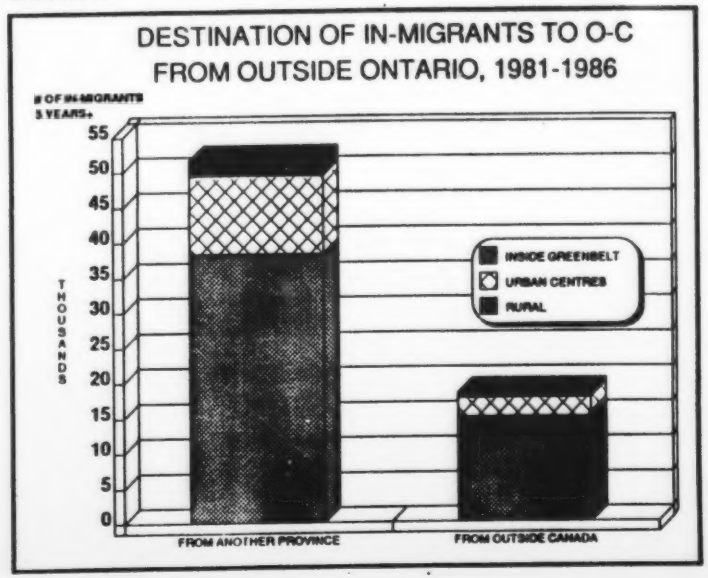


**5. Approximately 135,000 people moved to Ottawa-Carleton between 1981 and 1986.**

Of these, over 15,000 were from outside Canada, over 50,000 from some other province inCanada and approximatley 65,000 from somewhere else in Ontario. The latter figure is estimated from other sources as it is not available using published Census data. Urban centres outside the greenbelt attract a disproportionately large share of migrants from the rest of Canada . Areas inside the greenbelt boundary attract a disproportionate share of international migrants.

This large movement of people into Ottawa-Carleton is off-set to a significant extent by the movement of others out of Ottawa-Carleton. Outmigration is estimated to be about 100,000 in the same five year period.

Exhibit 6



# IMMIGRATION

See Tables 4 to 10 in the Appendix.

**1. Approximately 83% of Ottawa- Carleton's residents were born in Canada, much like the national average.**

There is a significant variation in the place of birth of residents of urban areas across Canada. Toronto, Hamilton and Vancouver have the highest share of people born outside Canada. Halifax, St. John and Quebec urban areas have the lowest share of immigrants.

The four westernmost urban areas: Victoria, Vancouver, Edmonton and Calgary, have experienced the greatest proportion of in- migrants from other provinces.

Ottawa-Carleton seems to fall in the middle.

**Exhibit 7**

DISTRIBUTION OF POPULATION BY PLACE OF BIRTH INSIDE AND OUTSIDE CANADA, 1986. (% OF TOTAL)

| AREA | BORN IN CANADA | | | BORN OUTSIDE CANADA |
|---|---|---|---|---|
| | SAME PROVINCE | DIFFERENT PROVINCE | TOTAL | |
| CANADA | 71 | 13 | 84 | 16 |
| ONTARIO | 66 | 11 | 77 | 23 |
| RMOC | 59 | 24 | 83 | 17 |
| TORONTO | 54 | 10 | 64 | 36 |
| HAMILTON | 66 | 9 | 75 | 25 |
| LONDON | 73 | 9 | 82 | 18 |
| HALIFAX | 71 | 22 | 93 | 7 |
| ST JOHN | 81 | 14 | 95 | 5 |
| MONTREAL | 80 | 4 | 84 | 16 |
| QUEBEC | 96 | 2 | 98 | 2 |
| WINNIPEG | 67 | 15 | 82 | 18 |
| SASKATOON | 74 | 17 | 91 | 9 |
| REGINA | 76 | 15 | 91 | 9 |
| CALGARY | 44 | 35 | 79 | 21 |
| EDMONTON | 56 | 26 | 82 | 18 |
| VANCOUVER | 45 | 26 | 71 | 29 |
| VICTORIA | 45 | 34 | 79 | 21 |

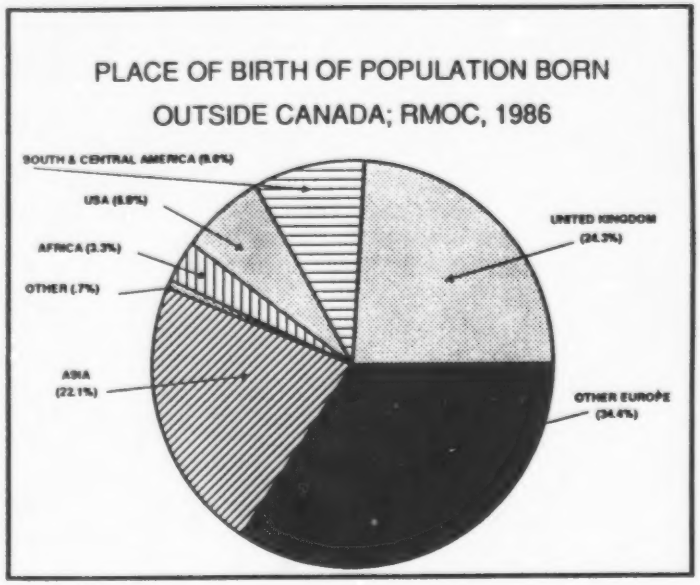
**2. A total of 100,710 residents of Ottawa-Carleton in 1986 were born outside Canada.**

Approximately 58% of immigrants to Ottawa-Carleton are from the United Kingdom, Italy and other European countries.

After Europe and the U.K., the next most frequent place of birth is Asia at approximately 18%, slightly higher than the Canadian or Ontario average. In very general terms, Ottawa-Carleton tends to reflect the pattern of Canada as a whole.

Table 4 in the Appendix illustrates the large variation in composition of the immigrant population by urban area. For example , 45% of Victoria's immigrants and 43% of Halifax immigrants were born in the U.K. Halifax also has close links with the USA which contribute 23% of the CMA's immigrant population.

Exhibit 8



**3. The rate of immigration has been fairly constant.**

It is difficult to compare periods of such varying duration as shown in Exhibit 9. However, on average, approximately 3% of immigrants arrived per year since the second world war. In the shortest and most recent period, the proportion per year has been slightly smaller.

Exhibit 9

PERIOD OF IMMIGRATION
(% OF TOTAL IMMIGRANTS)

| | CANADA | ONTARIO | RMOC |
|---|---|---|---|
| BEFORE 1946 | 10.4 | 8.2 | 6.6 |
| 1946 - 1966 | 40.0 | 43.1 | 42.1 |
| 1967 - 1977 | 31.2 | 32.0 | 31.2 |
| 1978 - 1982 | 12.3 | 11.0 | 12.2 |
| 1983 - 1986 | 6.1 | 5.7 | 7.9 |

**4. Over one half of immigrants to Canada between 1946 and 1977 now live in Ontario.**

Before and since this period the proportion is lower in Ontario but it remains close to one half. Of these, a disproportionately high share are in Metro Toronto. It is interesting to note that unlike other CMAs, Ottawa-Carleton is attracting a slightly higher proportion of the immigrant population of each successive period. However, the total population of Ottawa-Carleton is about one quarter of the Toronto CMA's while it represents only about one tenth the number of immigrants.

**Exhibit 10**

SHARE OF CANADIAN IMMIGRANTS IN URBAN AREAS IN ONTARIO, 1986

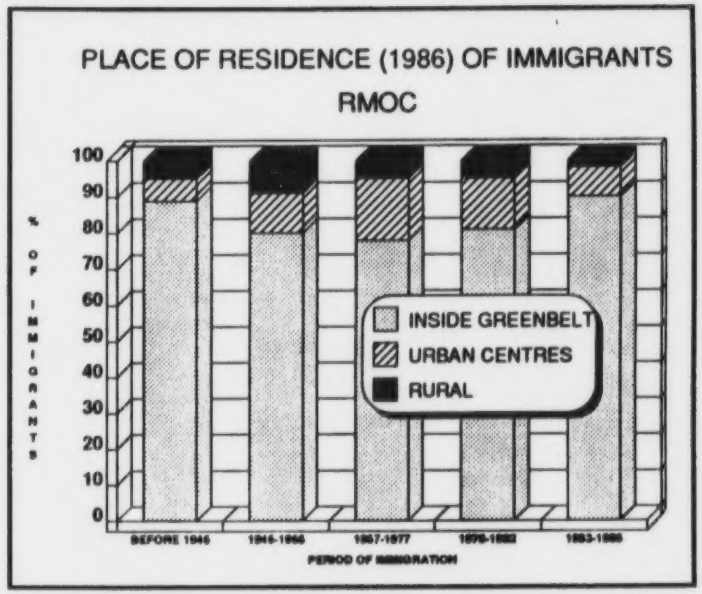
| | ONTARIO SHARE OF ALL IMMIGRANTS TO CANADA | URBAN SHARE OF IMMIGRANTS TO ONTARIO | | | |
|---|---|---|---|---|---|
| | | TORONTO | OTTAWA-CARLETON | HAMILTON | LONDON |
| BEFORE 1946 | 42.2 | 37.9 | 3.9 | 8.6 | 3.9 |
| 1946 - 1966 | 57.5 | 52.5 | 4.8 | 7.8 | 3.9 |
| 1967 - 1977 | 54.7 | 68.1 | 4.7 | 5.4 | 2.6 |
| 1978 - 1982 | 47.2 | 70.1 | 5.4 | 4.2 | 2.0 |
| 1983 - 1986 | 49.1 | 69.6 | 6.6 | 4.0 | 2.5 |

**5. There seems to be a fairly noticeable variation between place of residence within Ottawa- Carleton based on period of immigration.**

Exhibit 11 shows where the immigrant population lived in 1986, by their period of immigration.

It is likely that, once resident in Ottawa-Carleton, the immigrant population is as mobile as the rest of the population. Nonetheless, it could be deduced from the data that: a) the urbanized area inside the greenbelt attracts more than its expected share of immigrants particularly in the most recent period; and b) immigrants in the immediate post war period were more rural oriented than in other periods.

**Exhibit 11**



# OFFICIAL LANGUAGE

See Tables 11 to 13 in the Appendix.

**1. There has been a significant increase in the bilingual population in Ottawa-Carleton since 1971.**

Official language refers to the language in which the respondent is comfortable in conversation. Ottawa-Carleton has a significantly larger proportion of its population comfortable in both official languages than do Canada or Ontario as a whole. In addition, the differential has been growing steadily since 1971. In both Canada and Ontario, the distribution of the population between English and French has remained relatively constant.

Table 11 in the Appendix illustrates the larger variation between CMAs within Canada in terms of official language. Only Montreal has a higher proportion of its population that is bilingual (at 48%) than exists in Ottawa-Carleton (at 37%).

**2. Within Ottawa-Carleton, the highest levels of bilingualism are found in the Cities of Vanier, Gloucester, Ottawa, the Township of Cumberland and the Village of Rockcliffe Park.**

In general terms, the highest levels of population, comfortable in french only, are the same ones. The exception is Rockcliffe Park which, according to the census figures, has over half its population able to converse in both English and French but none of its population only able to speak French.

**Exhibit 12**

DISTRIBUTION OF POPULATION BY OFFICIAL LANGUAGE, 1971 - 1986
(% OF TOTAL)

| | CANADA | | | ONTARIO | | | OTTAWA-CARLETON | | |
|---|---|---|---|---|---|---|---|---|---|
| | 1971 | 1981 | 1986 | 1971 | 1981 | 1986 | 1971 | 1981 | 1986 |
| ENGLISH ONLY | 67.2 | 66.2 | 66.8 | 87.0 | 85.8 | 86.1 | 68.5 | 62.3 | 60.6 |
| FRENCH ONLY | 18.0 | 16.4 | 15.8 | 1.2 | 0.7 | 0.7 | 3.9 | 2.2 | 1.8 |
| ENGLISH & FRENCH | 13.4 | 15.1 | 16.2 | 9.3 | 10.7 | 11.7 | 26.7 | 33.8 | 36.7 |
| NEITHER ENGLISH NOR FRENCH | 1.5 | 1.2 | 1.2 | 2.2 | 1.7 | 1.6 | 0.9 | 0.8 | 0.9 |

# PERIOD OF CONSTRUCTION

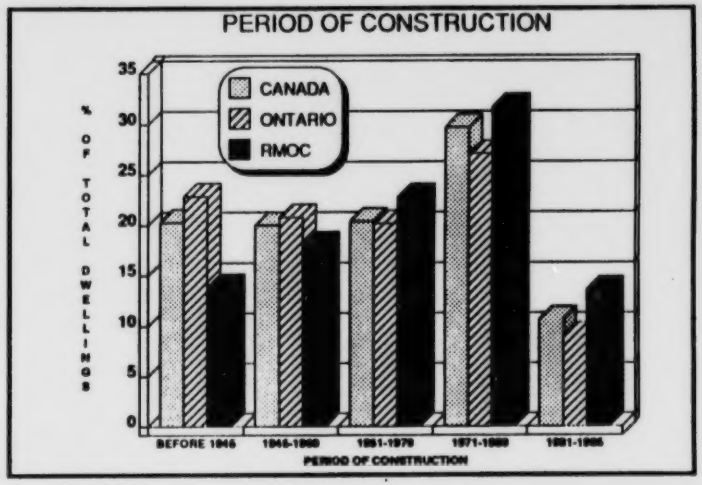
See Tables 14 to 16 in the Appendix.

**1. The rate of dwelling unit construction was more rapid in the period 1971 to 1980 than in any period before or since.**

On a per annum basis, dwelling unit construction is declining, having risen to a peak in the 1970s. Nonetheless, since 1961, the rate in Ottawa-Carleton has been more rapid than for Canada or Ontario as a whole. Only the metropolitan areas of Saskatoon, Edmonton and Calgary experienced more rapid rates of construction in the most recent five year period.

In Canada, approximately 40% of the existing stock was in place by 1960. The proportion is lower in Ottawa-Carleton (31%), Saskatoon (30%), Calgary (23%), and Edmonton (24%) where the growth has been much more recent.

**Exhibit 13**

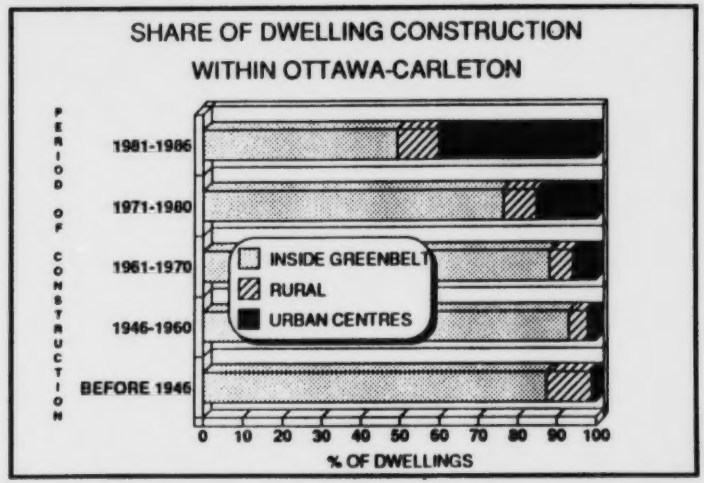


**2. As would be expected, urban centres outside the greenbelt are capturing an increasing share of construction activity.**

Before 1970, close to 90% of houses and apartments were constructed inside the greenbelt boundary. This shifted rapidly to 75% in the 1970s and around 50% in the early 1980s with the majority of growth in the urban centres outside the greenbelt.

Before 1946 and since 1971, the rural area has represented about 10% of construction of all dwelling units.

**Exhibit 14**



# PRINCIPAL HEATING FUEL

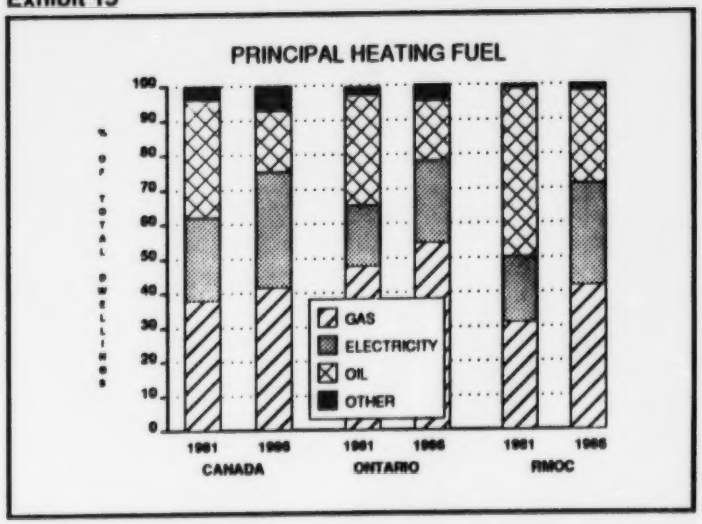
See Tables 17 to 19 in the Appendix.

**1. Between 1981 and 1986 there was a dramatic shift from oil to other heating fuels in dwellings in Canada.**

In Ottawa-Carleton, for example, almost 50% of units were heated with oil in 1981 but only 27% in 1986. Since Exhibit 13 indicates that only 13.6% of dwellings were constructed in this period, clearly many home owners made conversions. Gas and electricity each made similar gains but gas remained the more popular fuel.

All other large urban areas in Ontario and all western communities show a majority of their dwellings being heated by natural gas. Montreal and Quebec have a majority heated by electricity and Halifax a majority heated by oil. St. John is equally split between electricity and oil.

Exhibit 15

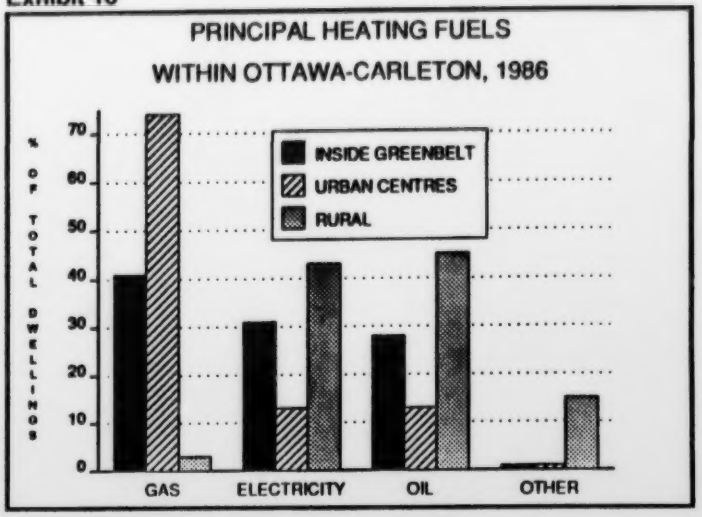


**2. Areas of more recent construction favour gas as a heating fuel.**

There is a significant difference between the principal heating fuels of urban areas inside the greenbelt, these outside the greenbelt and rural areas. This is based on the period of construction, the presence of gas services and the availability of alternate sources of heating. The rural area is the only one with a significant number of dwellings in the latter category.

There are many variations between municipalities however and these are summarized in Table 18 in the Appendix.

Exhibit 16



# INCOME

See Tables 20 to 24 in the Appendix.

**1. The highest average household income in 1985 was reported in the Toronto urban area at $42,960.**

In Ottawa-Carleton the average was marginally less at $42,826. Calgary was the only other urban area with an average household income over $40,000 in 1985.

**Exhibit 17**

AVERAGE HOUSEHOLD INCOME, 1985

| AREA | HOUSEHOLD INCOME |
|---|---|
| CANADA | $34,252 |
| ONTARIO | $38,022 |
| RMOC | $42,826 |
| TORONTO | $42,960 |
| HAMILTON | $36,705 |
| LONDON | $34,950 |
| HALIFAX | $36,526 |
| ST JOHN | $30,395 |
| MONTREAL | $33,049 |
| QUEBEC | $32,873 |
| WINNIPEG | $33,477 |
| SASKATOON | $33,671 |
| REGINA | $36,555 |
| CALGARY | $40,791 |
| EDMONTON | $37,213 |
| VANCOUVER | $36,086 |
| VICTORIA | $31,677 |

**2. In Ottawa-Carleton, approximately 33% of households reported a 1985 income in excess of $50,000.**

This compares with 21% in Canada as a whole and 25% in Ontario. While Ottawa-Carleton has a higher proportion of high income households, nevertheless 52,000 households reported a 1985 income of less than $20,000.

**Exhibit 18**

DISTRIBUTION OF HOUSEHOLDS BY AVERAGE 1985 INCOME

| | % OF TOTAL HOUSEHOLDS | | |
|---|---|---|---|
| INCOME | CANADA | ONTARIO | OTTAWA-CARLETON |
| $0-9,999 | 14.5 | 11.8 | 9.5 |
| $10,000-19,999 | 18.9 | 16.5 | 13.2 |
| $20,000-29,999 | 17.5 | 16.4 | 15.1 |
| $30,000-39,999 | 16.3 | 16.7 | 15.1 |
| $40,000-49,999 | 12.4 | 13.7 | 13.8 |
| $50,000+ | 20.4 | 25.0 | 33.3 |

**3. The variation in employment income between males and females in any area in Canada is much more significant than the variation in incomes between areas.**

The 1986 census asked respondents to record any employment income they received in 1985. In many cases this would not have represented a full year's work. In Canada, 41.6% of men and 58.2% of women reported less than a full year's work or part time employment.

However, for full time or part time workers, the female average income is only about 67% of the average for males. For comparison, the Canadian average for males is about 84% of the RMOC average.

Since a smaller proportion of females than males had any employment income in 1985, and in at least 50% of cases this was far less than a full year's work, females earned about 1/3 of the aggregate employment income.

**4. Within Ottawa-Carleton, household incomes varied from an average of $28,375 in Vanier to $146,314 in Rockcliffe Park in 1985.**

However, only the City of Vanier displayed an average income below that of Ontario as a whole. The averages for Ontario and the City of Ottawa are almost identical at $38,000.

**Exhibit 19**

EMPLOYMENT INCOME, 1985

| | CANADA | | OTTAWA-CARLETON | |
|---|---|---|---|---|
| | MALE | FEMALE | MALE | FEMALE |
| % POPULATION 15+WITH EMPLOYMENT INCOME | 75.7 | 55.5 | 81.1 | 64.0 |
| AVERAGE EMPLOYMENT INCOME | $23,415 | $13,028 | $28,036 | $16,383 |
| % FULL YEAR, FULL TIME | 58.4 | 41.8 | 65.7 | 50.0 |
| AVERAGE INCOME | $30,504 | $19,995 | $35,648 | $23,699 |
| % PART YEAR OR PART TIME | 41.6 | 58.2 | 34.3 | 50.0 |
| AVERAGE INCOME | $13,475 | $8,012 | $13,171 | $9,028 |
| % OF AGGREGATE EMPLOYMENT INCOME | 70 | 30 | 67 | 33 |

# MAJOR PAYMENTS

See Table 25 in the Appendix.

**1. In Ottawa-Carleton, 29% of tenant households and 12% of owner households spend more than 30% of their income on housing.**

This is slightly above the Ontario average. These figures represent the 1985 expenditure.

For tenants, Toronto exhibits a lower proportion spending more than 30% than do almost all urban areas across Canada. The variation is quite significant ranging from 26% in Toronto to 41% in Victoria.

For owners the variation is less acute, ranging from 9% in London to 16% in Calgary.

**2. Within Ottawa-Carleton, the variation is not large between areas.**

However, the City of Vanier does stand out as a municipality whose residents pay a large proportion of income on rent or ownership expenses. Stittsville also reports a large proportion of rental households spending in excess of 30% of their income in rent, but it should be noted that there are very few rental households in that community.

**Exhibit 20**

HOUSEHOLDS BY MAJOR PAYMENTS; URBAN AREAS, 1985

| GEOGRAPHIC AREA | TENANT HOUSEHOLDS PAYING 30% OR MORE OF HOUSEHOLD INCOME IN RENT | OWNER HOUSEHOLDS PAYING 30% OR MORE OF HOUSEHOLD INCOME IN EXPENSES |
|---|---|---|
| CANADA | 30.1 | 11.9 |
| ONTARIO | 26.9 | 10.9 |
| **RMOC** | **29.3** | **11.8** |
| TORONTO | 25.6 | 12.8 |
| HAMILTON | 27.9 | 9.9 |
| LONDON | 29.0 | 9.4 |
| HALIFAX | 31.9 | 13.1 |
| ST JOHN | 33.9 | 11.3 |
| MONTREAL | 28.5 | 13.5 |
| QUEBEC | 29.0 | 10.6 |
| WINNIPEG | 33.2 | 9.6 |
| SASKATOON | 40.8 | 12.3 |
| REGINA | 37.3 | 11.8 |
| CALGARY | 33.0 | 16.3 |
| EDMONTON | 33.8 | 15.0 |
| VANCOUVER | 39.0 | 15.0 |
| VICTORIA | 40.8 | 14.6 |

# EMPLOYMENT

See Tables 26 to 33 in the Appendix.

**1. Participation rates in Ottawa- Carleton are higher than the Canadian or provincial averages, and have been higher consistently over time.**

However, an examination of urban areas across Canada shows that in 1986, Calgary, Edmonton and Toronto had even higher levels of participation in the labour force.

Exhibit 21

PARTICIPATION RATES; CANADA AND OTTAWA-CARLETON, 1961-1986

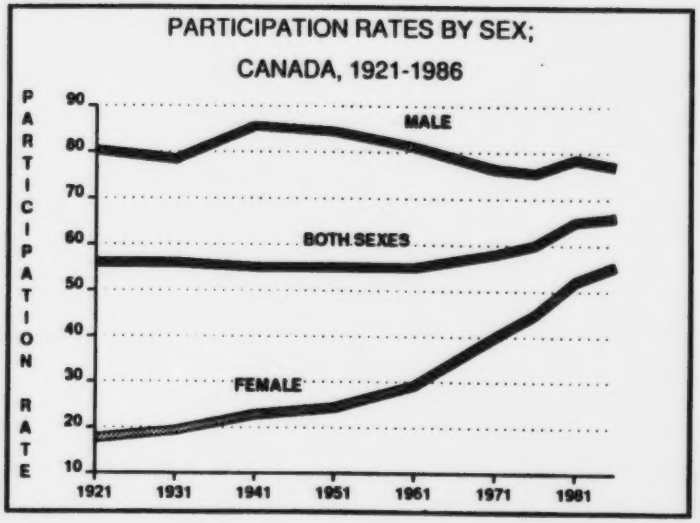
| YEAR | CANADA | | | OTTAWA-CARLETON | | |
|---|---|---|---|---|---|---|
| | M | F | T | M | F | T |
| 1961 | 81.1 | 29.3 | 55.3 | 82.1 | 37.2 | 58.7 |
| 1971 | 76.4 | 39.9 | 58.0 | 81.2 | 47.5 | 63.7 |
| 1976 | 75.6 | 44.8 | 60.0 | 78.4 | 52.1 | 64.7 |
| 1981 | 78.5 | 52.1 | 65.0 | 80.8 | 59.2 | 69.5 |
| 1986 | 77.0 | 55.4 | 66.0 | 81.3 | 63.1 | 71.8 |

**2. Participation in the labour force, on average was fairly constant between 1921 and 1971 and then showed a dramatic increase.**

The overall increase was due exclusively to increases in female participation. Female participation rates increased consistently for all age groups under 65 years since 1921. For elderly women the pattern has been less consistent but has shown a declining trend.

For men, the trend is different. Elderly men, over 65 years of age, as for women, have participated less frequently in the labour force. While the most significant increase for women occurred between 1961 and 1971, participation of men in the labour force showed a marked drop in this period. Since 1971, participation rates for men have been relatively constant except for a decline for the elderly and an increase for the very young.

Exhibit 22



**3. The actual number of individuals in Ottawa-Carleton who work has increased by 6,500 per year since 1961 and over 8,000 per year between 1981 and 1986.**

Again, the most dramatic increases are due to jobs being created and to more women working.

**4. Within Ottawa-Carleton, the highest participation rates are in the new urban centres.** This is closely related to the age structure of the population as there are few elderly.

The lowest male and female participation rates are in Rockcliffe Park, Ottawa and Vanier. These figures are summarized in Table 29 in the Appendix and Exhibit 24.

**5. The distribution of the labour force by industry group varies greatly across Canada.**

The largest variations exist in the size of the manufacturing sector and government services. These are the industry groups the least closely related to the size of the resident population.

Manufacturing ranges from less than 7% of the total in Victoria, Ottawa-Carleton, Regina and Halifax to over 20% in Toronto, Hamilton and Montreal. Government services ranges from 26% in Ottawa-Carleton to less than 5% in Toronto, Hamilton and London. These figures are summarized in Table 30 in the Appendix.

**Exhibit 23**

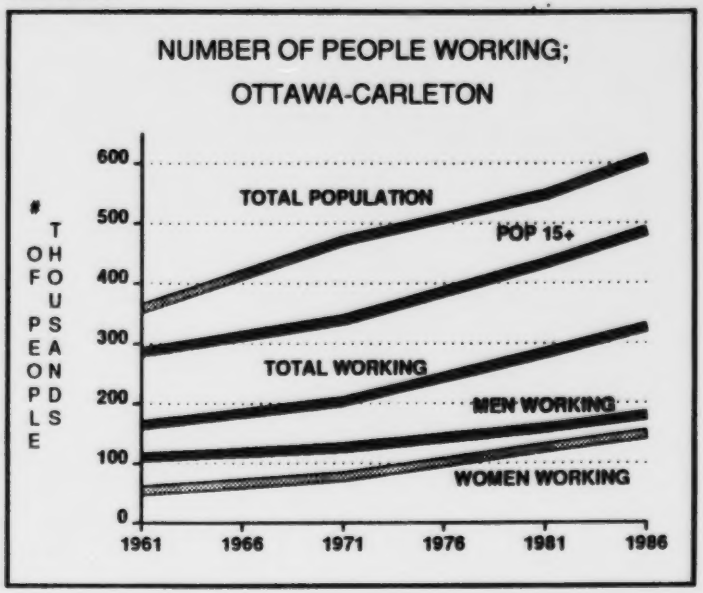


**Exhibit 24**

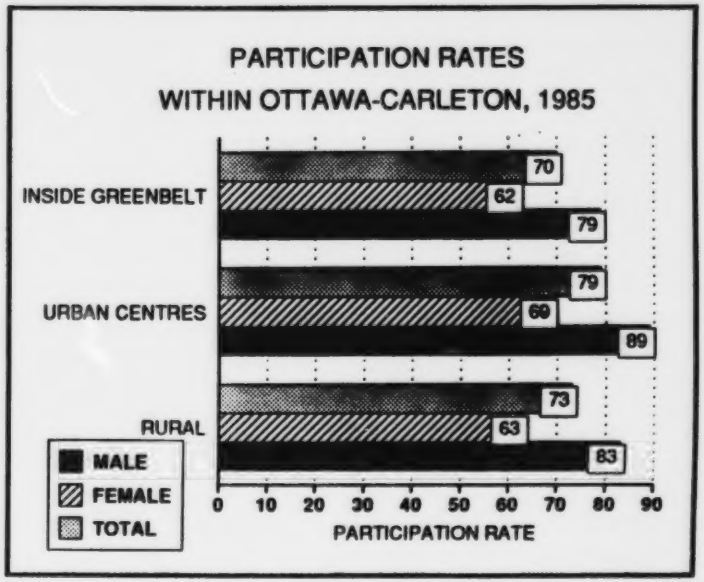

**6. Between 1971 and 1986, the experienced labour force in Ottawa-Carleton grew by 133,000 people and over 70% of the increase was in community, business and personal services.**

By 1986, the service sector represented 35% of the experienced labour force overtaking Public Administration as the largest group. Once again it is clear that female participation is increasing more rapidly than male participation. This is summarized in Exhibit 25.

**7. Within Ottawa-Carleton there are some variations in the distribution of the labour force by type of work and place of residence.**

The primary sector labour force is more rural. Kanata, Goulbourn and West Carleton have a higher proportion of their labour force working in manufacturing. Government sector involvement tends to be proportionately lower amongst rural residents and higher amongst residents of the East Urban Centre. These data are summarized in Table 32 in the Appendix.

**8. Occupations within Ottawa- Carleton are highly concentrated in a few groups.**

It has the highest proportion of its labour force in managerial and administrative occupations at 17% compared to a national average of 13%. A total of 23% of employees work in clerical and related fields, the same as the Toronto urban area but above the national average of 18%. The next most prevalent occupations are in the service fields at 13%, exactly the same as the national average.

While they are not a large proportion of the total, occupations related to natural science, engineering and math as well as social science, religion and artistic, are more significant in Ottawa-Carleton than elsewhere.

**9. There is a great difference in the distribution of occupations among women as compared to men.**

In Ottawa-Carleton, woman represent 45% of the labour force but approximate this level only in social sciences, sales and services as illustrated in Exhibit 26.

**Exhibit 25**

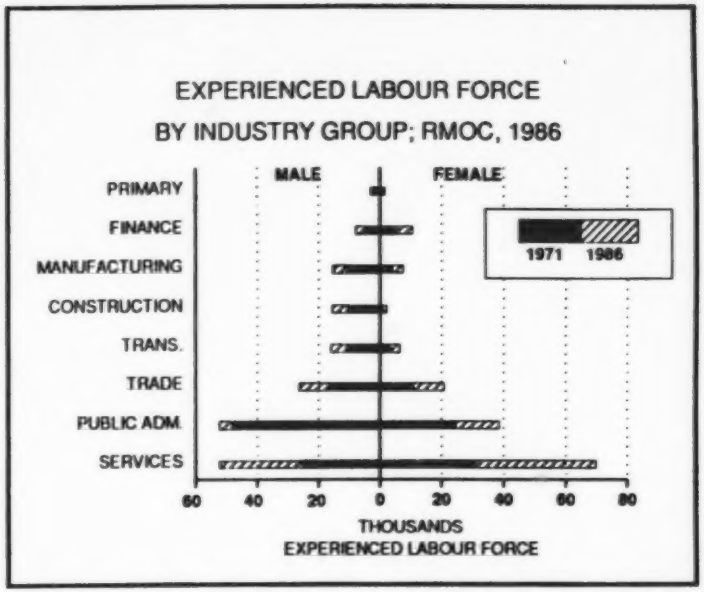

**Exhibit 26**

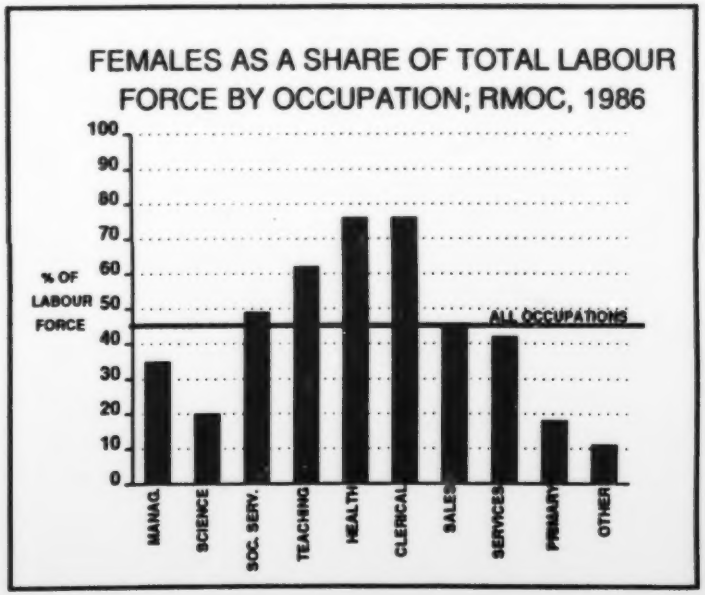


# EDUCATION

See Tables 34 to 37 in the Appendix.

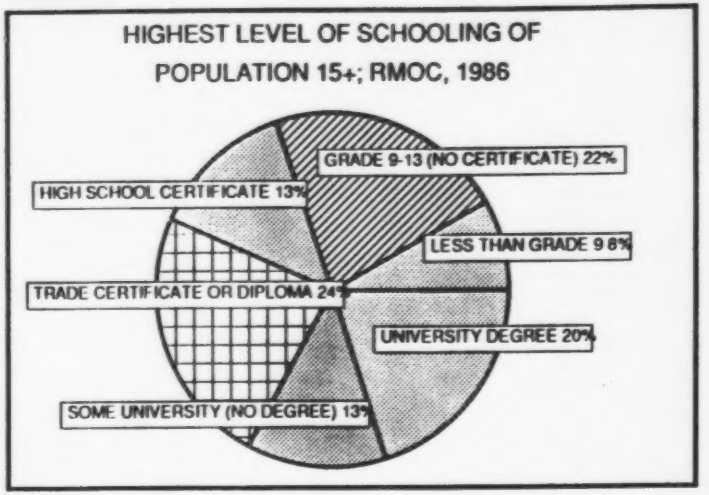
**1. Ottawa-Carleton has the largest proportion of its population with a university degree, at 20% compared with 10% in Canada as a whole and 11% in Ontario.**

Consequently, only 8% of Ottawa-Carleton's population has less than a grade 9 education compared with 17% nationally and 15% provincially. These figures are summarized in Table 34 in the Appendix.

Within Ottawa-Carleton, the population in the urban centres has generally achieved a higher level of formal education than have residents in other areas. The City of Vanier, Rural Cumberland and rural Gloucester have the highest proportion of their population with less than grade nine. However, the level is still at or below the national average.

Approximately half of the population of Rockcliffe Park has a university degree, at five times the national average.

Exhibit 27



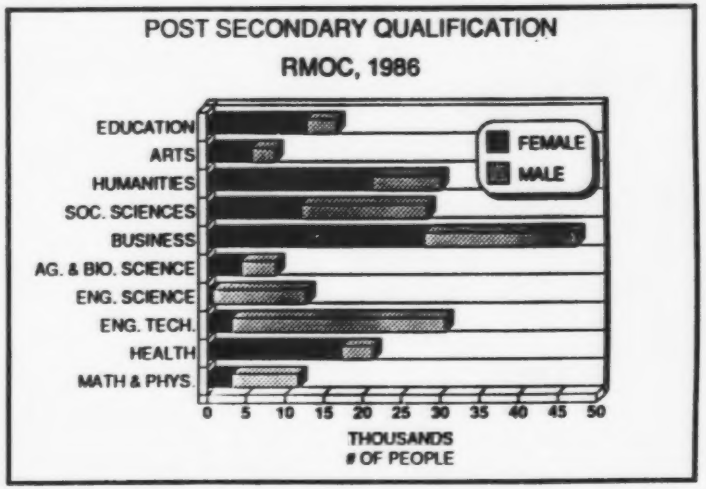
HIGHEST LEVEL OF SCHOOLING OF
POPULATION 15+; RMOC, 1986
GRADE 9-13 (NO CERTIFICATE) 22%
HIGH SCHOOL CERTIFICATE 13%
LESS THAN GRADE 9 8%
TRADE CERTIFICATE OR DIPLOMA 24%
UNIVERSITY DEGREE 20%
SOME UNIVERSITY (NO DEGREE) 13%

**2. Of a possible 485,735 people over 15 years of age in Ottawa-Carleton, 208,325 have a post secondary qualification. Approximately half are men and half are women.**

Of all fields of study, commerce, management and business administration is the most prevalent. In fact, 25% of all women and 18% of all men with a post-secondary qualification fall into this category.

Engineering and applied sciences, technology and trades, is the next largest group at 25% of men and 3% of women. These figures are summarized in Table 37 in the Appendix.

Exhibit 28



# APPENDIX

**Note:** **Municipal totals may be slightly inconsistent due to random rounding techniques used in the original data sources.**

HOME LANGUAGE refers to the language spoken at home by the individual at the time of the census.
If more than one language was spoken, the language spoken most often by the individual was to be reported.
